

## **PotashCorp Feed Plants Earn AFIA Safe Feed/Safe Food Certification**

Saskatoon, Saskatchewan — Potash Corporation of Saskatchewan Inc (PotashCorp) announced that each of its North American feed plants earned the American Feed Industry Association's (AFIA) Safe Feed/Safe Food Certification in December of 2005.

The five PotashCorp Feed Plants to earn this designation are located in Marseilles, Ill., Joplin, Mo., Aurora, N.C., Weeping Water, Neb., and White Springs, Fla.

While PotashCorp has been committed to producing only the safest feed ingredients for many years, company officials look proudly upon the Safe Feed/Safe Food Certification as a third-party endorsement of the company's track record in this area.

“If all feed ingredient suppliers and others involved in the animal production industry adhere to these guidelines, the likelihood of potential chemical and biological contaminants entering the manufacturing process will be significantly reduced,” said Dr. Steve Auman.

“Our products have been manufactured for years under very stringent safety guidelines in North America,” he added. “This certification is a way to ensure that all feed ingredient suppliers and others in the food production chain are working toward uniform safety standards. As a leader in the feed industry, it is important to us to be part of that effort.”

PotashCorp is the world's largest fertilizer enterprise producing the three primary plant nutrients and a leading supplier to three distinct market categories: agriculture, with the largest capacity in the world in potash, third largest in phosphate and fourth largest in nitrogen; animal nutrition, with the world's largest capacity in phosphate feed ingredients; and industrial chemicals, as the largest global producer of industrial nitrogen products and one of only three North American suppliers of industrial phosphates.
